C

CONFIDENTIALITY

The Veil: only the right eyes may see it · Spell: Velo!

Hang in one corner of the room

INTEGRITY

The Seal: no one has tampered with it · Spell: Sigillum!

Hang in a second corner

AVAILABILITY

The Lantern: it shines whenever you need it · Spell: Lumen!

Hang in a third corner

Three Pillars trial: scenario list

Instructor key · Req 3b · 4 minutes in the Fundamentals block

Setup: hang the C, I and A signs in three corners and stand in the fourth. **Play:** read one scenario aloud. Wardens run to the corner they think was hit, then explain. **Points:** +1 for each Warden in the right corner, tallied by lodge, and +1 teamwork for lodges that debate quietly. Six scenarios fit in 4 minutes. Use the rest as spares. **Trick round (rows 13-15):** tell Wardens that some attacks hit more than one corner. If they think two were hit, they stand halfway between those two corners. If they think all three were hit, they stand in the middle. Save the finale (row 15) for the end. Remind Wardens to walk fast.

#	Read aloud	Corner	Why
1	A hacker reads your private messages.	C	The wrong person can see them.
2	A hacker changes your grade in the school's online system.	I	The information was changed.
3	A game server crashes in the middle of a tournament.	A	Players cannot use it when they need it.
4	Someone posts your home address online.	C	Private information was exposed.
5	A virus scrambles your file so you cannot open it.	A	You cannot use your file. (Some Wardens may say I, since the file was altered. Accept it with a good reason.)
6	Someone edits a photo and says it is the original.	I	The photo was changed and passed off as real.
7	A shopping site goes down on the biggest sale day of the year.	A	Customers cannot use it.
8	A stranger finds your password list on a sticky note.	C	Someone who should not see it did.
9	Someone secretly changes your fantasy football lineup.	I	The information was changed without permission.
10	A school's website is flooded with fake traffic and nobody can log in.	A	Real users are locked out.
11	A student secretly copies the test answers from the teacher's computer.	C	Information was seen by someone who should not see it.
12	A glitch changes your saved game score to zero.	I	The data was changed and is no longer correct.
13	TRICK: Attackers lock a hospital's files with ransomware and also copy patient records to sell.	C + A	Files were locked (availability) and private records were stolen (confidentiality).
14	TRICK: A hacker breaks into the school grading system, reads every student's grades, and changes some of them.	C + I	Grades were seen by the wrong person (confidentiality) and changed (integrity).
15	FINALE: Attackers break into a store's server, copy its customer list, change some orders, and then crash the website.	C + I + A	All three were hit: records stolen (C), orders changed (I), and the site down (A). Everyone stands in the middle.

C = Confidentiality, I = Integrity, A = Availability. Some real attacks hit more than one, such as ransomware that locks files and also steals them. Accept a different answer when the Warden gives a good reason.
